

Ethylene Oxide Helps Make Products You Use Every Day

Look around your house. In the bathroom, you might find a few products like these.

In the bedroom, you probably sleep on these, have several of these in your closet, and use this to keep them clean.

In the garage, you might use these products in your car.

Whether you are using these products in your morning, evening, or weekend routines, they all have one thing in common. They've been manufactured with the help of a versatile and essential chemical building block called Ethylene Oxide.

Ethylene oxide is used to help make countless everyday products that businesses and families rely on.
