ACC LAUNCHES REDESIGN OF AMERICANCHEMISTRY.COM

WASHINGTON (June 6, 2016) – The American Chemistry Council (ACC) today launched a redesigned public site that takes a visual approach to highlight industry initiatives and how they influence our ability to develop innovative products, create jobs and compete globally.

“Our new, more modern website is a reflection of the very exciting time the business of chemistry is experiencing,” said ACC President and CEO Cal Dooley. “Abundant domestic natural gas supplies are fueling a manufacturing renaissance, and we are embarking on a new era for our industry marked by the recent progress in Congress to bring chemical regulation into the 21st century. Our new site highlights the progress we’ve made and the future we hope to create with the business of chemistry leading the way.”

In conjunction with the redesign of our main public site, ACC also launched a new online community, ChemistryMatters.com, where industry stakeholders can come together, united in one voice, to address our most pressing challenges and our most promising opportunities.

View the new AmericanChemistry.com and ChemistryMatters.com and be sure to follow us on Twitter and Facebook.

The American Chemistry Council (ACC) represents the leading companies engaged in the business of chemistry. ACC members apply the science of chemistry to make innovative products and services that make people’s lives better, healthier and safer. ACC is committed to improved environmental, health and safety performance through Responsible Care®, common sense advocacy designed to address major public policy issues, and health and environmental research and product testing. The business of chemistry is an $801 billion enterprise and a key element of the nation’s economy. It is the nation’s largest exporter, accounting for fourteen percent of all U.S. exports. Chemistry companies are among the largest investors in research and development. Safety and security have always been primary concerns of ACC members, and they have intensified their efforts, working closely with government agencies to improve security and to defend against any threat to the nation’s critical infrastructure.
