CPI STATEMENT ON SPRAY FOAM APPLICATION

WASHINGTON (November 15, 2012) – Members of the Center for the Polyurethanes Industry (CPI) of the American Chemistry Council include U.S. producers or distributors of chemicals and equipment used to make polyurethane or manufacturers of polyurethane products.

The following statement is attributed to CPI:

“Health and safety are priorities for the entire spray polyurethane foam industry. That is why CPI offers free and extensive information on spray foam health and safety considerations to homeowners, contractors and anyone else interested in spray foam. We encourage anyone interested in learning more about spray polyurethane foam to visit www.spraypolyurethane.org to take advantage of these resources.

“Spray foam can provide enormous benefits to homeowners, especially in places like Florida where climate control and moisture concerns are significant. Spray foam is a highly effective insulation material and has a unique ability to fill the gaps that can be difficult to seal and allow air to escape. Using spray foam to seal air leaks can help manage moisture and humidity in a building. By controlling moisture, spray foam can limit one of the key variables that can lead to mold and mildew growth.

“If a homeowner or contractor has questions related to a specific spray foam product, they should contact the manufacturer for more information.”

The American Chemistry Council (ACC) represents the leading companies engaged in the business of chemistry. ACC members apply the science of chemistry to make innovative products and services that make people’s lives better, healthier and safer. ACC is committed to improved environmental, health and safety performance through Responsible Care®, common sense advocacy designed to address major public policy issues, and health and environmental research and product testing. The business of chemistry is a $760 billion enterprise and a key element of the nation’s economy. It is the largest exporting sector in the U.S., accounting for 12 percent of U.S. exports. Chemistry companies are among the largest investors in research and development. Safety and security have always been primary concerns of ACC members, and they have intensified their efforts, working closely with government agencies to improve security and to defend against any threat to the nation’s critical infrastructure.
