

LITHIUM BATTERY MATERIALS PANEL **POWERING INNOVATION**

LITHIUM BATTERY MATERIALS PANEL MEMBERSHIP DETAILS

Member Benefits

The American Chemistry Council's (ACC) Lithium Battery Materials Panel represents the major manufacturers of chemicals and materials that are utilized in the production of lithium batteries. Lithium batteries are crucial to modern life as they are used in everything from cell phones to cameras to pacemakers and have the potential to power innovation in areas like the auto industry. But before any of these products can be produced, lithium materials and chemistry must be shepherded through the process from design to mass marketing. That is where the Lithium Battery Materials Panel plays an important role. The Panel is uniquely situated to advocate for the processes, chemistries and materials necessary for large scale production and commercialization of lithium batteries.

The Panel provides many services to its members, including:

- issue management services, such as regulatory, legislative and marketplace advocacy, as well as research and legal services;
- legislative, regulatory and codes and standards tracking, as needed;
- updates on global regulatory activity;
- forums for peer discussion on lithium battery materials and their uses; and,
- media monitoring, proactive and responsive public relations services and marketing assistance.

Advancing Innovation

By supporting lithium materials from innovation to mass production, the Panel:

- raises awareness about lithium battery materials, their contribution to modern society, and their applications in the marketplace;
- works closely with appropriate regulatory bodies to ensure that the materials used in lithium batteries are sustainable;
- supports good stewardship and recycling of lithium materials;
- supports research and studies that evaluate the effectiveness and safety of materials used in lithium batteries; and,
- educates relevant government authorities, the marketplace and other appropriate stakeholders on issues concerning lithium battery materials.

Lithium Battery Materials Panel Membership Details

Manufacturers and producers of materials used in lithium batteries and their downstream users are eligible for full membership and may actively participate in all meetings and decisions concerning the Panel's internal structure and policies, as well as its official positions and external strategy on public policy outreach. Members of the panel are responsible for covering an equal share of the ACC management costs. Members receive a full-range of services offered by ACC.

- retail/marketplace outreach;
- state, federal and international regulatory issue management;
- industry statistics and economic information;
- communications/social marketing; and,
- political mobilization.

Full Membership Rates

- ACC member companies \$20,000 per year
- Non-ACC member companies \$24,000 per year

The ACC Lithium Battery Materials Panel Founding Members:

- BASF
- Celgard
- The Dow Chemical Company
- FMC Corporation
- TODA America
