

UNITED STATES

Plentiful and affordable natural gas supplies have transformed America's chemical industry from the world's high-cost producer five years ago to among the lowest-cost producers today. The United States now enjoys a decisive competitive advantage in the making of basic petrochemicals. **Companies from around the world** are investing in new U.S. production capacity, leading to **industry revival and new jobs**. ACC analyzed the economic benefits of these investments.

American manufacturers use natural gas to fuel and power a wide variety of processes. **Chemical companies** use ethane, a natural gas liquid derived from shale gas, as a feedstock. **Competitively-priced natural gas** and ethane are enabling chemical companies to build new plants, expand, or improve their facilities in the United States. Other industries **stand to benefit** as the downstream effects of shale gas are felt.

NEW MANUFACTURING PROJECTS ARE GROWING OUR ECONOMY & CREATING JOBS

325

POLICY PRIORITIES

Government policies will influence whether the U.S. fully realizes the shale gas opportunity.

Access - Allow access to natural gas reserves on government and private lands.

State Regulations - Continue responsible state-based regulations that avoid undue restrictions on production.

Infrastructure - Expedite the building of reliable infrastructure to transport supplies.

Permitting - Ensure a timely, transparent, and efficient regulatory permitting process for manufacturing projects and investments.

Trade - Expand access to foreign markets for U.S. goods.
