

U.S. Chemical Investment Linked to Shale Gas: \$194 Billion and Counting

April 2018

Shale Gas – A Game Changer for U.S. Competitiveness

After years of high and volatile natural gas prices, new domestic supplies of more affordable natural gas and natural gas liquids (NGLs) have created a competitive advantage for U.S. chemical manufacturers, leading to industry growth and new jobs. Companies from around the world are investing in new projects to build or expand their shale-advantaged capacity in the United States. As of this month, 325 projects cumulatively valued at \$194 billion in capital investment have been announced since 2010, with 49 percent of the investment completed or under construction, 45 percent in the planning phase, and 6 percent of unknown/delayed status. Much of the investment is geared toward export markets for chemistry and plastics products, which can improve America's trade balance. Fully 64 percent of the announced investment is by firms based outside the United States, or includes a foreign partner.

Economic Benefits of U.S. Chemical Industry Investment

ACC examined* 325 chemical industry investment projects cumulatively valued at \$194 billion announced as of April 2018. The projects include new facilities, expansions, and factory re-starts. We analyzed permanent economic impacts as a result of ongoing increased chemical industry output made possible by lower natural gas prices and increased availability of ethane, an NGL and key chemical feedstock. Findings are summarized below.

Economic Contributions from Chemical Industry Investment in the U.S.

From Higher Chemical Industry Output 2010-2025 (Permanent)			
	Jobs	Payroll (\$Billion)	Output (\$Billion)
Direct	70,091	\$8.2	\$110.5
Indirect	397,321	\$33.0	\$162.6
Payroll-Induced	378,281	\$19.7	\$64.3
Total	845,694	\$60.9	\$337.3

Government Policies Key to Realizing the Shale Gas Opportunity

A number of key policies will influence whether domestic natural gas and NGL supplies remain robust, affordable, and accessible and, in turn, whether America's manufacturing renaissance reaches its full potential. They include:

- Access to oil and natural gas reserves on federal, state, and private lands;
- Continuing state-based regulation of unconventional oil and gas production;
- Ensuring a timely, transparent, and efficient regulatory permitting process for manufacturing projects and investments, such as new facilities and expansions;
- Expediting the building of infrastructure, such as pipelines, that links energy production to chemical facilities;
- Expanding access to foreign markets for U.S. goods.

*This latest analysis builds on the ACC report, "Shale Gas, Competitiveness, and New U.S. Chemical Industry Investment – An Analysis of Announced Projects." Released in May 2013, it analyzed the 97 potential projects valued at \$72 billion that had been announced from 2010 until March 2013, and is available at <https://www.americanchemistry.com/First-Shale-Study/>. We update the figures as new projects are announced.
